

WARATAH HARDENED NO-SHANK SAW TEETH

Waratah hardened no-shank saw teeth are engineered to strike the right balance between cutting-edge performance and durability.

- Patented machined tip built to perform in tough conditions.
- Ability to hold edge even when working through dirt contact.
- Designed to maintain performance in rocky environments.

WARATAH HARDENED NO-SHANK SAW TEETH

Built for demanding cutting conditions, Waratah hardened no-shank saw teeth are designed to maintain a sharp edge even through dirt contact and rocky environments.

The patented machined tip helps protect against chipping during rock impacts and assists in supporting long-lasting cutting performance in tough, abrasive conditions.

Compatible with competitive wide kerf no-shank (shankless) tooth-enabled blades using 1" bolts, these teeth were field tested to help ensure dependable durability and performance.
